

CERTIFICATE OF COMPLIANCE

OUR ORDER NO. _____ DATE _____

SOLD TO _____ ITEM _____

To Whom It May Concern:

Anvil International "Standard Merchant" couplings are manufactured in accordance with the latest specifications of ASTM A-53 / ASME SA-53 and ASTM A865 for couplings.

Plating on galvanized couplings (when specified) is in conformance with ASTM Specification B-633 Type III Electro-galvanized.

The couplings will be marked with the Trademark  for identification purposes.

The "Standard Merchant" couplings are normally used on schedule 40 pipe.

The 1/8" through 2" Standard Merchant couplings have straight "NPSC" threads and are normally used for low to moderate pressures (up to approximately 150 psi), where temperature and shock are negligible.

The 2-1/2" through 6" Standard Merchant couplings have tapered "NPT" threads with allows them to be used for slightly higher ranges of up to 200 psi, again with minimum shock and temperature variation.

Sincerely,

Dale E. Thompson
Quality Manager
