This is to certify that the Anvil International LLC manufacturing plant in Henderson, TN uses approximately 70% recycled material by weight in the manufacturing and assembly of various carbon steel, cast iron, and forged steel products.

This estimation is based upon an analysis completed by surveying the vendors of our purchased raw materials and in-process subcomponents, noting the recycled content percentage of each type where given, and comparing the amounts of each of the material types we acquire.

Note that this percentage does not include an estimation of recycled content in fasteners as the supplier could not provide an estimate.

Respectfully Submitted,

Rhett Woody
Product Engineering Supervisor
