RECYCLED CERTIFICATE CONTENT SPF THREADED AND GROOVED COUPLINGS AND FITTINGS

This is to certify that the SPF couplings and fittings manufactured in China contain 95% recycled and recovered materials.

The 95% recycled-content in our malleable, gray [cast], and ductile [nodular] iron products, such as threaded and grooved fittings and couplings is mostly of pre-consumer recycled materials. They may consist of trimmings, steel scrap and other by-products generated by other manufacturers.

We purchase these above mentioned to-be-recycled materials from established/certified suppliers. They must pass Anvil's stringent quality inspection process, including mandatory radiation screening before they are accepted and used in our foundry melting process.
